It comes with powerful features and has a limited version of the professional features. In this guide, we will look at how to increase the resolution of your images with Photoshop Elements. The method we will use requires you to apply a filter to your Photoshop file. The downside of using filters is that they destroy the original file. This is usually not a problem because Photoshop elements uses a 30 day free trial, during which you can go back to the original to download it. Additionally, by activating the trial version of Photoshop Elements, you will be given 1GB of storage space to store a copy of the original image. If you do decide to use this method, you can use the Free Edit Features to create a new image. These features are only available with the trial version of Photoshop Elements. Step 1. Open Photoshop Elements This page is required before you continue Click on the button in the bottom left corner to open Elements or choose to open the program by clicking on the Start button. Step 2. Click on the arrow in the bottom right corner. Step 3. Select Use Filter: Unsharp Mask The Unsharp Mask filter can add sharpness to edges and other parts of your image. It comes with a limited version of the professional version and is usually not recommended in many cases, but it can be used as a last resort if all other methods fail. A radiation image recording system with a stimuable phosphor sheet is utilized in recording, on a stimuable phosphor sheet, a radiation image of an object exposed to a radiation, such as a X-ray. The stimuable phosphor sheet, on which the radiation image is stored, is exposed to stimulating rays, such as a laser beam, which cause it to emit light in proportion to the stored radiation image. The emitted light is detected with a photoelectric conversion element, for example, and converted to an electric signal. The radiation image can be reproduced by performing image processing, such as a synthesis of the electric signal, on the electric signal. The radiation image reproducing system is described in Japanese Unexamined Patent Publication Nos. 55(1980)-12429, 56(1981)-11395, and 56(1981)-11396. FIG. 18 is a schematic block diagram showing a whole configuration of the radiation image recording and reproducing system. In the figure, reference numeral 1 denotes a control unit; 2, a mask panel; 3, an image information transmitting and receiving system which is connected to the control unit 1 and the mask panel 2; 4, a cassette station; 5, a stimuable phosphor sheet cassette, containing a stimuable phosphor sheet therein; 6, a transfer unit, which contains and transfers the stimuable phosphor sheet; 7, a cassette store unit; 8, a light detecting unit; 9, a cassette supply unit; 10, a work table; 11, a camera unit; 12, a camera platform unit; 13, an image reading unit; 14, a cassette loading unit; 15, a belt unit; 16, a conveyor unit; 17, a conveyor controller; 18, an image processing unit; 19, a control panel; and 20, a reader unit. In the figure, the control unit 1 has an arrangement capable of controlling the operation of the whole of the apparatus in response to an operation request from an external apparatus. In the figure, the image information transmitting and receiving system 3, the mask panel 2, the cassette station 4, the light detecting unit 8, the cassette supply unit 9, the work table 10, the camera unit 11, the camera platform unit 12, the image reading unit 13, the cassette loading unit 14, the belt unit 15, the conveyor unit 16, the conveyor controller 17, the image processing unit 18, the control panel 19, and the reader unit 20 are also connected to the control unit 1.
