Compare prices from a few large platforms! (more...) Surprisingly, mobile gaming isn't as popular as it might seem. Google Play is still holding the first place, and it's the platform on which the vast majority of games (about 50%) are made. However, it's worth pointing out that Apple's App Store and the Nintendo eShop have gained the interest of game developers, so they're increasingly making games for mobile platforms as well. If you're thinking about creating your own game, mobile apps are a great place to start. The demand for these applications, called indie apps, is growing every day, and developers are quick to embrace new technologies that allow them to create their games in a lightning-fast and cost-effective manner. Nowadays, there's no single platform that dominates mobile app development, so you might find yourself adopting a number of different tools to create a mobile game. In this article, we'll show you a few of the best tools for indie game development. Unity 4 Unity 4 is one of the most popular tools for game development because it offers a large number of pre-built templates for creating games for iOS and Android platforms. It's a very intuitive and powerful platform that includes everything you need to begin your project, including audio, game design and development. As stated above, Unity 4 comes with a large number of templates that developers can use to create games, but the prices of these templates are relatively high. The good news is that you can open Unity 4's user interface and download a free template that will allow you to code your game in no time. MonoGame MonoGame is another excellent and easy-to-use development platform for game creation. It's a fairly new tool, but it's already well-regarded because it has a very easy-to-learn interface and you can choose whether you want to program with a scripting language, a visual programming language, or both. Swing2D Swing2D is another excellent tool for creating 2D games. It has a very intuitive user interface that makes it easy to use and to develop games. Besides, the Swing2D user interface is available in a free version, so there's no need to purchase an expensive tool to create a 2D game. Xcode 4.x If you're planning to start game development

Compare prices from a few large platforms Compare.it is a very simple extension for Google Chrome that you can use to save just a bit of time when you're looking to find the best price for a certain product. Let's suppose you're planning on buying a new PlayStation from Amazon. All the best features from Compare.it appear in different colors (yellow, green, and red) so you will always be able to see them instantly. The icons at the top of the page represent the merchants: Amazon, eBay, Sears and Walmart, among others. Once you've clicked on a product, you will see three possible options on the extensions bar: Compare, eBay, and Amazon. The clear winner is the Compare option, the extension that will automatically perform the search for you. Now, to save even more time, click on the + button to add other merchants to the comparison. If you haven't set a comparison price, there will be an orange banner right below the merchant logo with the message "We have not compared the products." Here you can add as many brands, products or stores as you want. At the bottom of the window, there are the usual filters, like free shipping, products (laptops, TVs, etc.), time of delivery and price. For instance, you can compare the prices of an iPhone 6 and an iPhone 7 and choose when the service will be available. The interface is quite nice because it shows you the lowest price first. You can scroll your way down to find the best price and filter out the products, add new options or change the filters. Compare.it is a free extension for Chrome that you can install from the Chrome Web Store. If you are interested in other similar extensions, don't forget to check our Free SpeedSearch extension! iPhones and iPads are popular devices, there's no denying that, and because they are so popular they also have more apps and games available than any other kind of device. Some people who own an iOS device wonder what kind of apps and games they can get for them, so for that reason, this article will help you get the best apps and games for iOS devices. Best Apps for Your iPhone It's simple, all you have to do is scroll down to the number that corresponds to your device, and find the app that is interesting to you. Search

The extension allows you to compare prices on thousands of products from one place. Find the best product for you and save money! With Compare.it, you can: Compare prices for thousands of products Compare products from thousands of online retailers See all the prices for products on the web Top uses for Compare.it Compare.it is a powerful extension that has a lot of potential. It can be used to compare prices across platforms, it has a great database of products with great reviews and it's a pretty straightforward tool to use. However, for the average person, this tool is probably not the most helpful one. What the platform offers in a nutshell: Compare prices for thousands of products Compare products from thousands of online retailers See all the prices of the products on the web Top uses for Compare.it If you are looking for a way to compare prices across platforms, Compare.it is the right platform. It has a great database, it's simple to use and it's safe. But even if it had many uses, it would be doomed to fail on the fact that it only works with the aforementioned platforms. Although a user's shopping experience would be improved significantly by the fact that this platform is more than just a search bar, it's a limited and expensive one. Thus, as far as I can tell, only people who exclusively shop on eBay, Amazon, Walmart and AliExpress would use this extension. Moreover, it has not been updated in almost a year and it still does not offer a much more reliable platform. The reason why Compare.it is doomed to fail It's difficult for
